1. INTRODUCTION

1.1 Overview

The KLAES Legal Search Module represents a revolutionary advancement in property due diligence and record verification for Kano State. This module enables authorized users to conduct comprehensive legal searches on land and property records, generating standardized, legally admissible reports that detail the complete transaction history of any property.

Figure 1: The KLAES Legal Search Module Sidebar

1.2 Purpose of This Manual

This training manual is designed to:

- Provide comprehensive guidance on using the KLAES Legal Search Module
- Explain the technical architecture and data sources
- Detail step-by-step procedures for conducting legal searches
- Describe the weighing methods and data validation processes
- Guide users through report generation and verification

1.3 Target Audience

This manual is intended for:

- Revenue Officers (Token Generation)
- Deeds Registry Staff
- Legal Search Officers
- System Administrators
- Ministry Directors and Supervisors
- Accredited Legal Practitioners (Online Portal Users)

1.4 Key Features

- Multi-Source Data Aggregation: Combines data from four independent database tables
- Blockchain-Inspired Architecture: Ensures data integrity and traceability
- Automated Weighing Methods: Intelligent duplicate detection and record prioritization
- Pay-Per-Search Model: Secure token-based payment system
- Real-Time Timeline View: Chronological presentation of all property transactions
- QR Code Verification: Tamper-proof report authentication

Figure 2: The Pay-per-Search Page (Overview)

2. PAYMENT TOKEN SYSTEM

2.1 Overview

The Legal Search Pay-Per-Search module operates on a secure token-based payment system. Each search requires a unique Payment Transaction Token that is directly linked to a specific File Number (FileNo).

2.2 Token Generation Process

Step 1: Payment Confirmation

- Applicant makes payment for Legal Search service
- Payment is confirmed and recorded in the KLAES system
- Revenue Officer receives payment notification

Step 2: Token Generation

- Revenue Officer accesses the Revenue Management Module
- Selects "Generate Legal Search Token"
- System prompts for FileNo selection
- Officer selects the specific FileNo for which payment was made
- System generates unique Payment Transaction Token

Step 3: Token Linkage

- Token is automatically linked to the specific FileNo
- Token is marked as "Active" and ready for use
- Token can only be used once (single-use token)

2.3 Token Validation

When a FileNo is selected under the Legal Search Pay-Per-Search sub-module, KLAES automatically performs two critical validations:

Validation 1: Token Existence Check

- System verifies if a token exists for the selected FileNo
- If no token is found, search cannot proceed
- User is prompted to contact Revenue Officer for token generation

Validation 2: Token Validity Check

- System verifies if the token is still valid (not expired, not used)
- If token is invalid or already used, search cannot proceed
- User must request a new token

The screenshot shows a web interface titled "Search Token Found". It contains a light blue rounded rectangle with two sections: "APPLICANT NAME" with the value "123OK" and "PROPERTY LOCATION" with the value "Plot 146, LAYIN POLICE STREETATION, Dawakin Tofa, Dambatta, Kano, Bunkure". Below this, a message states: "Valid token found for File No: **RES-2026-29**. Click below to verify and proceed." Underneath the message is a text input field containing ten dots. At the bottom are two buttons: a blue "Verify & Search" button and a grey "Cancel" button.

Figure 3: The Token Validation Screen

The screenshot shows a web interface titled "Access Denied". At the top is a large orange circle with a white exclamation mark. Below the title, a message states: "No valid search token found for File No: RES-2026-27. Please generate a token before proceeding." At the bottom is a red button with the text "Understood".

Figure 4: Token Access Control Screen

Figure 5: The Token Generation Screen from Revenue Module

2.4 Token Management

Token Status Indicators:

- Active: Token generated, not yet used
- Used: Token has been consumed for a search
- Expired: Token validity period has elapsed
- Cancelled: Token manually invalidated by Revenue Officer

Token Validity Period:

- Standard validity: 7 days from generation
- Expired tokens must be regenerated
- Used tokens cannot be reused

3. LEGAL SEARCH ENGINE ARCHITECTURE

3.1 Overview

The Legal Search Engine (LSE) is the core processing unit of the Legal Search Module. Once payment token validation is successful, the FileNo is parsed to the LSE, which executes a comprehensive search across all relevant database tables.

3.2 Search Process Flow

Step 1: FileNo Parsing

- Validated FileNo is sent to LSE
- LSE initiates multi-table query execution

Step 2: Property Identifier (PropID) Resolution

- LSE extracts or generates PropID for the FileNo
- PropID serves as the primary key to link related transactions
- PropID connects transactions across tables even when:
 - FileNo changes (e.g., Temporary FileNo to Permanent FileNo)
 - Multiple related files exist (e.g., subdivisions, mergers)
 - Transactions span different registration periods

Step 3: Multi-Table Query Execution

- LSE queries all four MSDAM tables simultaneously
- Results are aggregated and normalized
- Duplicate detection algorithms are applied

Step 4: Results Compilation

- All related transactions are compiled
- Weighing methods are applied to prioritize records
- Timeline is generated chronologically

3.3 Database Tables Overview

The LSE searches across four primary database tables that hold property-related transactions:

File History 7 Property Record 4 Deeds Registration 0 CoFO 1							
S/N	RW	TW	INSTRUMENT TYPE	PARTY 1	PARTY 2	PARTY 3	#
1	8	2.5	Deed Of Assignment	Alh Saminu Saadu	Alh Ismaila Muhtari	-	2
2	8	2.5	Deed Of Assignment	Alh Ismaila Muhtari	Mutari Enterprises Company Ltd	-	1
3	8	2.5	Deed Of Mortgage	Societe Generate Bank Nig Ltd	Mutari Enterprises Company Ltd	-	1
4	8	2.5	Deed Of Mortgage	International Merchant Bank	Mutari Enterprises Company Ltd	-	4
5	8	2.5	Deed Of Surrender And Release	Societe Generate Bank Nig Ltd	Mutari Enterprises Company Ltd	-	1
6	8	2.5	Deed Of Surrender And Release	International Merchant Bank	Mutari Enterprises Company Ltd	-	1
7	8	2.5	Deed Of Mortgage	Oceanic Bank	Mutari Enterprises Company Ltd	-	1

Figure 6: The Database Tables involved in Legal Search with total number of records per table

3.3.1 File History (FH) Table

Purpose: Warehouses all transactions as recorded in the physical file during File Indexing

Data Source:

- Captured by MDC Indexers during Mass Data Capture exercise
- Represents transactions recorded in the physical file
- Pre-dates KLAES implementation

Key Characteristics:

- Contains historical transaction data
- May have varying levels of detail depending on file condition
- Indexed during the File Indexing phase of MDC

Population Method:

1 Physical File → Indexer Review → Data Entry → FH Table

3.3.2 Property Records Assistant (PRA) Table

Purpose: Captures transactions from physical instruments in the Deeds Registry

Data Source:

- Captured by PRA Unit of KLAES EDMS
- Based on actual registered instruments (Assignments, Mortgages, etc.)
- Pre-dates KLAES implementation

Key Characteristics:

- Generally richer in detail than FH Table
- Based on Registration Details Sheets (RDS)
- More structured data format
- Represents formal instrument registrations

1 Deeds Registry Instruments → PRA Unit → Data Capture → PRA Table

3.3.3 Deeds Registration (DR) Table

Purpose: Contains all instruments registered via the automated KLAES system

Data Source:

- Generated through KLAES Deeds Registration Sub-Module
- All new instrument registrations post-KLAES go-live
- Real-time data entry

Key Characteristics:

- Fully digital and structured
- Highest data quality and completeness
- Integrated with payment and approval workflows
- Includes digital signatures and QR codes

1 Online Application → KLAES Workflow → Registration → DR Table

3.3.4 Certificate of Occupancy (CofO) Table

Purpose: Warehouses CofO records from multiple sources

Data Sources:

1. Manual CofOs: Captured during File Indexing (pre-KLAES)

2. KANGIS CofOs: Migrated from KANGIS system

3. KLAES CofOs: Generated via KLAES system (post go-live)

Key Characteristics:

- Combines legacy and modern records
- Includes Occupancy Permits (OP) as root titles
- Supports full title chain reconstruction

1 Multiple Sources → Data Migration/Indexing → CofO Table

4. MULTI-SOURCE DATA AGGREGATED METHOD (MSDAM)

4.1 Overview

The Multi-Source Data Aggregated Method (MSDAM) is the foundational search methodology employed by KLAES Legal Search. MSDAM leverages blockchain-inspired concepts to ensure data integrity, completeness, and traceability across multiple independent data sources.

4.2 MSDAM Architecture

Core Principles:

1. Independent Data Sources: Each of the four tables operates as a standalone data warehouse
2. Logical Linkage: Tables are linked through PropID and FileNo relationships
3. Data Integrity: Multiple sources provide cross-validation
4. Non-Repudiation: Transactions recorded in multiple tables cannot be easily disputed
5. Complete Traceability: Full transaction history from root title to current status

Multi-Source Data Aggregation Model
Blockchain Concept

LEGEND A: ● Preferred ● Dropped

LEGEND B: ● Duplicate ● Unique

Figure 7: The Multi-Source Aggregate Pane

4.3 Search Initiation Process

Scenario 1: Indexed File

...

Step 1: Search request initiated with FileNo

Step 2: System queries File Indexing Table (metadata warehouse)

Step 3: File metadata retrieved (PropID, current holder, parcel details)

Step 4: Request parsed to all four MSDAM tables using PropID

Step 5: Results aggregated and returned

...

Scenario 2: Non-Indexed File

...

Step 1: Search request initiated with FileNo

Step 2: System checks File Indexing Table - No record found

Step 3: Request parsed directly to all four MSDAM tables

Step 4: File information constructed from available transactions

Step 5: Last transaction on timeline used to populate File Information Pane

Step 6: Results aggregated and returned

...

4.4 Data Aggregation Process

Phase 1: Parallel Table Queries

- All four tables queried simultaneously
- Results returned independently
- No inter-table dependency during query phase

Phase 2: Record Normalization

- Records standardized to common format
- Missing fields populated with NULL values
- Date formats unified
- Party names normalized

Phase 3: Duplicate Detection

- Records compared across tables
- Potential duplicates flagged
- Weighing methods applied (see Section 5)

Phase 4: Timeline Construction

- All unique and preferred records selected
- Sorted chronologically
- Timeline Weighing Method applied
- Final timeline generated

4.5 Legend System

The Legal Search interface features a two-way legend system to help users understand transaction status:

Figure 8: The Legal Search Legend

Legend A: Record Preference Status

Preferred Records (Green)

- Records with the highest score/weight
- Selected for inclusion in final timeline
- Considered the most reliable version of a transaction
- Displayed in green highlight

Dropped Records (Red)

- Records with lower score/weight
- Not selected for final timeline

- Superseded by preferred records
- Displayed in red highlight
- Still visible for audit purposes

Legend B: Record Uniqueness Status

Duplicate Records (Orange)

- Records that appear more than once
- May appear in same table or across multiple tables
- Flagged for user attention
- Displayed in orange highlight
- Weighing methods determine which version is preferred

Unique Records (Blue)

- Records that appear only once
- No duplicates detected
- Displayed in blue highlight
- Automatically included in timeline (subject to other validations)

5. WEIGHING METHODS

5.1 Overview

To resolve duplicate transactions and prioritize records, KLAES Legal Search employs three sophisticated weighing methods. These methods work in an automated, hierarchical fashion to ensure the most accurate and complete transaction history is presented.

5.2 Hierarchy of Weighing Methods

The weighing methods are applied in the following order:

1. Record to Record Weighing (RW) - Highest priority
2. Table to Table Weighing (TW) - Secondary priority
3. Timeline Weighing Method - Final priority

Important Note: Record to Record Weighing supersedes Table to Table Weighing, even when a record is found in a table with a lower weight.

5.3 Record to Record Weighing Method (RW)

Applicable Tables: File History (FH) and Property Records Assistant (PRA)

Purpose: Compare individual records field-by-field to determine which version is more complete and reliable.

Fields Used for Comparison:

SN	Field	Weight	Description
1	Party 1, Party 2, Party 3 (combined)	2	All parties to the transaction
2	Registration Particulars	2	Description of the transaction
3	Transaction Date	2	Date the transaction occurred
4	Registration Time	2	Time of registration (if available)
5	Registration Date	2	Date of registration
	Maximum Score	10	

Scoring Process:

Step 1: Field Comparison

- Each field in Record A is compared to corresponding field in Record B
- If field values match exactly: Award full weight (2 points)
- If field values partially match: Award partial weight (1 point)
- If field values do not match: Award zero (0 points)

Step 2: Score Calculation

```
1 Total Score =  $\Sigma$ (Field Weights)
2 Maximum Possible Score = 10
```

Step 3: Record Selection

- Record with higher score is marked as "Preferred" (Green)
- Record with lower score is marked as "Dropped" (Red)
- If scores are equal: Apply Table to Table Weighing

Example:

```
1 Record A (FH Table):
2 - Parties: John Doe → Jane Smith (Match: 2 pts)
3 - Particulars: Assignment (Match: 2 pts)
4 - Transaction Date: 15/03/2015 (Match: 2 pts)
5 - Registration Time: NULL (No Match: 0 pts)
6 - Registration Date: 20/03/2015 (Match: 2 pts)
7 Total Score: 8/10
8
9 Record B (PRA Table):
10 - Parties: John Doe → Jane Smith (Match: 2 pts)
11 - Particulars: Assignment of Plot 123 (Partial: 1 pt)
12 - Transaction Date: 15/03/2015 (Match: 2 pts)
13 - Registration Time: 14:30 (No Match: 0 pts)
14 - Registration Date: 20/03/2015 (Match: 2 pts)
15 Total Score: 7/10
16
17 Result: Record A is PREFERRED (8 > 7)
```

Scope:

- Applies to duplicates within the same table (FH-FH or PRA-PRA)
- Applies to duplicates across both tables (FH-PRA)

5.4 Table to Table Weighing Method (TW)

Applicable Tables: File History (FH) and Property Records Assistant (PRA) only

Purpose: Provide a baseline preference when Record to Record Weighing results in a tie or when records are too dissimilar to compare effectively.

Table Weights:

SN	Table	Weight	Rationale
1	Property Records Assistant (PRA)	5	Richer data source; based on Registration Details Sheets; more structured and complete
2	File History (FH)	2.5	Summary data from physical files; may lack detail; dependent on file condition

Application Process:

Step 1: Check RW Score

- If RW scores are equal (tie situation)
- OR if records are too dissimilar to compare

Step 2: Apply Table Weight

- Record from PRA Table receives 5.0 weight
- Record from FH Table receives 2.5 weight

Step 3: Record Selection

- PRA record is marked as "Preferred" (Green)
- FH record is marked as "Dropped" (Red)

Rationale for PRA Preference:

1. Data Richness: PRA captures full Registration Details Sheets, while FH captures only summaries from the physical file
2. Structured Format: PRA data is captured in standardized fields
3. Quality Control: PRA Unit performs dedicated data validation
4. Source Reliability: Based on actual registered instruments

Example:

```

1 Record A (FH Table):
2 - RW Score: 6/10
3 - Table Weight: 2.5
4 - Total: 8.5
5
6 Record B (PRA Table):
7 - RW Score: 6/10 (TIE)
8 - Table Weight: 5.0
9 - Total: 11.0
10
11 Result: Record B (PRA) is PREFERRED

```

5.5 Timeline Weighing Method

Applicable To: All transactions that appear in the final Timeline Pane

Purpose: Prioritize transactions based on instrument type and legal significance, ensuring the most important title documents are prominently displayed.

Instrument Weights:

SN	Instrument Type	Weight	Priority	Description
1	Occupancy Permit (OP)	10	Highest	Root title document; establishes initial ownership
2	Transfer of Title (ToT)	9	Very High	Automatic system-generated transfer following OP
3	Right of Occupancy (Rofo)	8	High	Certified right of occupancy
4	Certificate of Occupancy (CofO)	1 (plus date)	Standard	Final certificate of ownership
5	All Other Instruments	1 (plus date)	Standard	Assignments, Mortgages, etc.

Application Process:

Step 1: Instrument Type Identification

- Each transaction is classified by instrument type
- Weight assigned based on instrument category

Step 2: Date-Based Sorting (Within Same Weight)

- For instruments with same weight (e.g., multiple CofOs)
- Primary Sort: Registration Date (most recent first)
- Secondary Sort: Transaction Date (if Registration Date unavailable)

Step 3: Timeline Positioning

- Higher weight instruments appear prominently
- Within same weight: Chronological order maintained
- System-generated ToT automatically follows original OP

Special Rules:

Rule 1: OP as Root Title

- OP always appears at top of timeline (weight 10)
- Establishes the beginning of title chain
- All subsequent transactions linked to OP

Rule 2: Automatic ToT Generation

- When original OP holder transfers rights
- System automatically generates ToT record
- ToT weight (9) ensures it follows OP in timeline
- Maintains chain of title integrity

Rule 3: Rofo vs CofO

- Rofo (weight 8) takes precedence over CofO (weight 1)
- Reflects progression from provisional to final title
- Both may exist for same property at different times

Rule 4: Date Consideration for Standard Instruments

- For instruments with weight 1 (CofO, Assignments, etc.)
- Registration Date is primary sorting criterion
- Ensures chronological accuracy

Example:

1	Timeline Entries:	
2		
3	1. OP (Occupancy Permit)	Weight: 10
4	Date: 10/01/2010	Position: 1st
5		
6	2. ToT (Transfer of Title - System Generated)	Weight: 9
7	Date: 15/06/2012	Position: 2nd
8		
9	3. Rofo (Right of Occupancy)	Weight: 8
10	Date: 20/08/2012	Position: 3rd
11		
12	4. Assignment	Weight: 1
13	Date: 10/03/2015	Position: 4th
14		
15	5. Mortgage	Weight: 1
16	Date: 15/07/2018	Position: 5th
17		
18	6. CofO (Certificate of Occupancy)	Weight: 1
19	Date: 20/12/2020	Position: 6th

5.6 Weighing Method Integration

How the Three Methods Work Together:

1	Step 1: Record to Record Weighing (RW)
2	Compare individual records field-by-field
3	Calculate scores (0-10)
4	Mark preferred/dropped
5	If tie → Proceed to Step 2
6	
7	Step 2: Table to Table Weighing (TW)
8	Apply table weights (PRA=5.0, FH=2.5)
9	Break ties from Step 1
10	Select preferred record
11	
12	Step 3: Timeline Construction
13	Collect all preferred records
14	Apply Timeline Weighing Method
15	Sort by instrument weight (10, 9, 8, 1)
16	Within same weight: Sort by date
17	
18	Step 4: Final Timeline Display
19	Chronological presentation with instrument priority

Important Notes:

1. RW Supersedes TW: Even if a record is in FH (lower table weight), if it scores higher in RW, it will be preferred over a PRA record with lower RW score.
2. Timeline Weighing is Independent: Once records are selected via RW/TW, Timeline Weighing determines their position in the final timeline, not their selection status.
3. No Circular Dependencies: Each weighing method operates independently and sequentially to avoid conflicts.

6. USER INTERFACE GUIDE

6.1 Overview

The KLAES Legal Search interface is designed for efficiency and clarity, featuring switchable views, interactive panes, and powerful tools for data validation and report generation.

6.2 File Search Page

Access Point: Main Menu → Legal Search → File Search

Purpose: Initial entry point for conducting a legal search

Key Elements:

Figure 11: The Legal Search FileNo Input page

File Number Input Field:

- Enter the FileNo to search
- System validates format
- Auto-suggest may appear for indexed files

Token Validation Display:

- Shows token status (Active/Used/Expired)
- Displays linked FileNo
- Indicates if search can proceed

Search Button:

- Initiates search process
- Only active if valid token exists

Cancel Button:

- Returns to main menu
- Does not consume token

Figure 12: The Search Page after the FileNo is parsed (with number of records per table) - Table View

Toggle Tabs:

Tab 1: Table View

- Displays transactions in tabular format
- Columns: Date, Instrument Type, Parties, Status
- Sortable columns
- Quick scan of all transactions

Tab 2: Card View

- Displays transactions as cards
- More detailed preview
- Visual representation
- Easier to read for non-technical users

Purpose of Toggle: Confirmation page where user can review transactions before proceeding to detailed search or discontinuing.

Figure 13: The Search Page after the FileNo is parsed (with number of records per table) - Card View

6.3 Main Legal Search Interface

The main interface features three primary panes arranged for optimal workflow:

Figure 14: Overview of the 3 Panes

6.4 File Information Pane

Location: Left panel of main interface

Purpose: Displays core file metadata and current property details

File Information

Details about the selected file

Land Use: Period/Tenancy:

Submit

Figure 17: Add New Record Interface

Refresh Tool:

- Button: "🔄 Refresh"
- Refreshes only the MSDAM Pane
- Does not reload entire page
- Fetches latest data from database
- Useful after adding new records

Comparison Feature (FH & PRA Only):

Purpose: Side-by-side comparison of same transaction across FH and PRA tables

How It Works:

1. System identifies potential duplicates using PropID
2. Displays both records in comparison view
3. Shows RW score for each field
4. Highlights differences
5. Indicates which record is preferred

RW and TW Fields:

- Visible only under FH and PRA tabs
- Shows calculated weights
- Helps users understand why a record is preferred/dropped
- Educational tool for data quality awareness

Figure 19: Timeline Pane

Display Format:

Chronological Arrangement:

- Primary Sort: Registration Date (oldest to newest)
- Secondary Sort: Transaction Date (if Registration Date unavailable)
- Instrument weight influences visual prominence but not chronological order

Timeline Entries:

Each entry displays:

- Date: Registration or Transaction Date
- Instrument Type: OP, ToT, Rofo, CofO, Assignment, etc.
- Weight Indicator: Visual icon showing weight (10, 9, 8, 1)
- Parties: From → To
- Status: Preferred (Green), Dropped (Red), Duplicate (Orange), Unique (Blue)
- Details: Brief description of transaction

Visual Indicators:

- Green Border: Preferred record
- Red Border: Dropped record

- Orange Border: Duplicate flagged
- Blue Border: Unique record
- Bold Text: High-weight instruments (OP, ToT, RofO)

Tools Available:

1. Clean-up Mode

Purpose: Advanced data validation and correction tools

Access: Toggle switch "Clean-up Mode ON/OFF"

When Activated: Additional tools appear for each timeline entry

Sub-Tools:

a) Match (Match Records)

- Purpose: Link orphaned records to the file
- Use Case: Record exists in database but not linked to current FileNo
- Process:
 1. Select orphaned record
 2. Click "Match"
 3. Confirm PropID linkage
 4. Record added to timeline
- Audit Trail: Logged with user ID and timestamp

b) Drop (Drop Records)

- Purpose: Remove records that don't belong to this file
- Use Case: Record appears in search but belongs to different FileNo
- Process:
 1. Select incorrect record
 2. Click "Drop"
 3. Confirm removal
 4. Record marked as "Dropped" (Red)

- Note: Record remains in database but excluded from this file's timeline

c) Remove (Remove from Timeline Only)

- Purpose: Temporarily hide record from timeline without deleting
- Use Case: Record is valid but shouldn't appear in current view
- Process:
 1. Select record
 2. Click "Remove"
 3. Record hidden from timeline
 4. Can be restored later
- Note: Record still exists in source table

d) Edit (Edit Record)

- Purpose: Correct errors in transaction details
- Use Case: Date typos, misspelled names, incorrect particulars
- Process:
 1. Select record
 2. Click "Edit"
 3. Modify fields
 4. Save changes
- Permissions: Requires elevated user rights
- Audit Trail: All edits logged with before/after values

2. Arrange Tool

Purpose: Manually re-order transactions

Use Case: Transactions lack key dates or dates are incorrect

Process:

1. Click "Arrange"

2. Drag and drop entries to new positions

3. Confirm re-ordering

4. System updates display order

5. Original dates preserved in database

Note: Use sparingly; chronological accuracy is critical

The screenshot shows a 'Timeline' interface with a table of transactions. A red box highlights the 'Weighing' button in the top right corner. The table has columns for S/N, SOURCE, WEIGHT, PARTY 1, PARTY 2, PARTY 3, INSTRUMENT TYPE, REG. PARTICULARS, TRANSACTION DATE, REG. TIME, REG. DATE, SIZE, CAVAT, and COMMENT. The table contains 8 rows of transaction data.

#	S/N	SOURCE	WEIGHT	PARTY 1	PARTY 2	PARTY 3	INSTRUMENT TYPE	REG. PARTICULARS	TRANSACTION DATE	REG. TIME	REG. DATE	SIZE	CAVAT	COMMENT

Figure 20: The Manual Arrange Transactions Tool Activated

3. Weighing Tool

Purpose: View detailed weighing scores in table format

Access: Click "Weighing" button

Display: Table view showing:

- Transaction ID
- Instrument Type
- RW Score (if applicable)
- TW Score (if applicable)

- Timeline Weight
- Final Priority Score
- Preferred/Dropped Status

Use Case: Audit and quality control

4. View Detailed Records Tool

Purpose: Preview the official Legal Search Report

Access: Click "View Detailed Records" button

Process:

1. System generates report using official template
2. Opens in preview mode
3. User can review before printing
4. Print Manager activates

Print Manager Features:

Copy 1: Original

- Nigeria Coat of Arms watermark
- Full legal validity
- QR Code for verification
- Signature pads
- For official use

Copy 2: File Copy

- "File Copy" watermark across page
- No Coat of Arms
- For internal records
- Not for legal proceedings

Figure 21: The Timeline Tools

Figure 22: The Clean-up Mode

Figure 23: Print Manager Interface

Figure 24: Print Manager Interface with the Print Count

Timeline Action Menus

Location: Top-right of Timeline Pane

Figure 25: Timeline Action Menus - A

Figure 26: Timeline Action Menus - B

Available Actions:

1. Apply File Info

Purpose: Update File Information Pane from timeline transaction

Use Cases:

- File not indexed; populate from best available transaction
- Correct errors in File Info using timeline data
- Switch File Info to reflect different transaction

Process:

1. Select transaction on timeline
2. Click "Apply File Info"
3. Confirm which fields to update
4. File Info Pane refreshes

Example:

- File shows Holder: "John Doe"
- Timeline shows Assignment to "Jane Smith" in 2020
- Apply File Info updates Holder to "Jane Smith"

2. Add Caveat

Purpose: Manually add a caveat that existed pre-KLAES

Use Case:

- Caveat was placed before KLAES
- Caveat not captured in indexing
- Caveat may have expired but needs to be recorded

Process:

1. Click "Add Caveat"
2. Enter caveat details:
 - Caveator Name
 - Date Placed
 - Grounds for Caveat
 - Expiry Date (if known)

3. Save

4. Caveat appears on timeline

Note: Caveats placed via KLAES are automated and don't require manual entry

3. Remove Caveat

Purpose: Remove or lift a caveat

Use Cases:

- Caveat has expired
- Caveat was wrongly placed
- Caveat lifted by court order

Process:

1. Select caveat on timeline

2. Click "Remove Caveat"

3. Enter reason for removal

4. Confirm

5. Caveat marked as "Lifted" on timeline

Note: Record remains for audit purposes but marked as inactive

Save Caveat

×

Recording an existing caveat not yet in the system

This caveat has already expired / been lifted

☐ Record will be saved as **Expired** — is_caveated will remain 0, but a historical comment will be written and the row saved to the caveat table.

7. TOOLS AND FEATURES

7.1 New Search Tool

Location: Main toolbar

Purpose: Quick navigation to File Search page

Functionality:

- Click "New Search" button
- Redirects to File Search page
- For Pay-Per-Search: Requires new token for each FileNo
- For Official Search: No token required

Token Management:

- One token per FileNo per search
- Token consumed when search completed
- New search requires new token

7.2 Timeline Quick View

Location: Main toolbar

Purpose: Aggregate view of all transactions

Functionality:

- Click "Timeline" button
- Opens full-screen timeline view
- All transactions displayed chronologically
- No pane distractions
- Export options available

Use Case: Quick overview without detailed analysis

Figure 30: The Weight Summary Page

7.3 Additional Comments and Remarks Section

The Legal Search Report Template includes a dedicated Comments/Remarks Section that provides critical supplementary information about the property title. This section combines both system-generated remarks and user-inputted comments to create a comprehensive professional assessment.

Ground Rent Including Land Use Charge Not Paid [Save](#)

Amounting to ₦ 0.00 [Comment](#) [Optional comment](#)

Litigation Comment [Save](#)

Comment [E.g. Subject title is currently under litigation in Suit No. ...](#)

No Certificate of Occupancy Remark [Save](#)

Based on our available records, the subject title is currently at the Letter of Grant stage, hence Certificate of Occupancy is yet to be issued. However the title is free from encumbrances.

Figure 31: Comments/Remarks Section of Legal Search Report

The system supports three (3) distinct comment types:

7.3.1 Ground Rent and Land Use Charge Comment

This comment field captures financial obligations related to the property:

- Ground Rent Arrears: Outstanding ground rent payments
- Land Use Charge (LUC) Arrears: Unpaid land use charges

- User Commentary: Professional observations or notes regarding payment status

Purpose: Provides transparency on the property's financial compliance status and alerts stakeholders to any outstanding statutory payments that may affect the title or future transactions.

7.3.2 Litigation Comment

This field documents any legal proceedings affecting the property, excluding standard encumbrances:

- Scope: Litigation other than Caveats or Mortgages (which are automatically captured as encumbrances in the transaction timeline)
- Examples: Court injunctions, property disputes, inheritance litigation, boundary conflicts
- Functionality: Users can easily add, edit, and save litigation comments

Purpose: Ensures that potential buyers, lenders, and other stakeholders are aware of any active legal proceedings that may impact the property's marketability or title integrity.

7.3.3 No Certificate of Occupancy Remark (System-Generated)

This is an automated remark generated by the system when no Certificate of Occupancy (CofO) is found in the property's transaction history:

Default Text:

"Based on our available records, the subject title is currently at the Letter of Grant stage, hence Certificate of Occupancy is yet to be issued. However the title is free from encumbrances."

Trigger Condition: The system automatically adds this remark when none of the transactions across all MSDAM tables (File History, PRA, Deeds Registration, CofO) is classified as a Certificate of Occupancy.

Purpose:

- Manages expectations regarding the title's current stage in the land administration lifecycle

- Clarifies that the absence of a CofO is not an error but reflects the property's actual status
- Provides reassurance that despite the lack of CofO, the title is verified as free from encumbrances

7.3.4 Edit and Customization Capabilities

All comments and remarks—whether system-generated or user-inputted—can be edited by authorized users before the final report is generated. This flexibility ensures:

- Accuracy: Users can correct or update information based on the latest available data
- Professional Judgment: Legal Search Officers can add nuanced observations specific to the property
- Context: Additional explanations can be provided for complex situations not fully captured by standard fields
- Quality Control: Supervisors can review and refine comments before report issuance

Editing Process:

1. Navigate to the Comments/Remarks section in the Legal Search interface
2. Select the comment type to edit
3. Modify the text as needed
4. Save changes (system logs edit with user ID and timestamp)
5. Changes are reflected in the final report preview

Audit Trail: All edits to comments are logged in the system audit trail, maintaining accountability and traceability of modifications.

7.3.5 Best Practices for Comments

When Adding Comments:

- Be specific and factual
- Reference relevant transaction dates and instrument numbers
- Use professional, objective language

- Avoid speculative statements
- Clearly distinguish between verified facts and observations

When Editing System-Generated Remarks:

- Review the automatic remark for accuracy
- Modify only if there is verified information contradicting the system output
- Document the reason for modification in the edit log
- Ensure consistency with the transaction timeline

Litigation Comments:

- Include case numbers where available
- Specify the court and nature of litigation
- Note the current status (pending, resolved, appealed)
- Indicate potential impact on the title

This comprehensive comments and remarks functionality ensures that the Legal Search Report provides not just raw data, but professional, contextualized information that supports informed decision-making in property transactions.

7.4 Search Filters

Location: Above each pane

Available Filters:

By Date Range:

- Start Date
- End Date
- Apply filter to show only transactions within range

By Instrument Type:

- Checkboxes: OP, Rofo, CofO, Assignment, Mortgage, etc.
- Select multiple types
- Filter display

By Party Name:

- Search box

- Enter party name
- Shows transactions involving that party

By Status:

- Preferred, Dropped, Duplicate, Unique
- Filter by color code

7.5 Export Options

Available Formats:

PDF Export:

- Official Legal Search Report
- File Copy version
- Custom date range
- Selected transactions only

7.5 User Permissions

Permission Levels:

Level 1: Viewer

- Can view search results
- Cannot edit or add records
- Can export reports
- Standard Legal Search Officer

Level 2: Editor

- All Viewer permissions
- Can add new records
- Can edit existing records
- Can use Clean-up Mode tools
- Senior Legal Search Officer

Level 3: Administrator

- All Editor permissions
- Can drop records permanently

- Can modify weighing parameters
- Can override system decisions
- System Administrator only

Permission Enforcement:

- Tools grayed out if no permission
- Audit trail logs all actions
- User ID captured for every action

8. LEGAL SEARCH REPORT TEMPLATE

8.1 Overview

The KLAES Legal Search Report is the official output of the Legal Search Module. It is a legally admissible document that presents the complete transaction history of a property in a standardized, professional format.

8.2 Report Components

[

Figure 33: The Legal Search Report Template – File Copy

8.2.1 Header Section

Ministry Logos:

- Kano State Ministry of Land and Physical Planning logo (left)
- Kano State Government logo (right)
- Official letterhead format

Report Title:

- "LEGAL SEARCH REPORT"
- Bold, centered
- Prominent placement

Report Metadata:

- Report Number (auto-generated)

- Date of Generation
- Time of Generation
- Generated By (User Name and ID)

8.2.2 File Information Section

File Details:

- File Number
- File Type
- Current Status
- LGA and Location

Parcel Information:

- Plot Number
- Area/Size
- Land Use Purpose
- Coordinates (if available)

Current Holder:

- Full Name
- Address
- Contact Details
- Date of Acquisition

8.2.3 Transaction History (Timeline View)

Format: Chronological table

Columns:

1. S/N: Serial number
2. Date: Registration or Transaction Date
3. Instrument Type: OP, ToT, Rofo, CofO, Assignment, etc.
4. Parties: From → To
5. Particulars: Brief description

6. Registration Details: Volume, Page, Number (if applicable)

7. Remarks: Additional notes

Visual Indicators:

- High-weight instruments (OP, ToT, RofO) in bold
- Color coding maintained from interface
- Clear chronological flow

8.2.4 Comments/Remarks Section

Purpose: Professional observations and notes

Content:

- Summary of title chain
- Notable observations
- Potential issues flagged
- Recommendations (if any)

Prepared By:

- Legal Search Officer name
- Signature
- Date

8.2.5 Watermark

Original Copy:

- Nigeria Coat of Arms watermark
- Faint, background placement
- Does not obscure text
- Indicates official status

File Copy:

- "FILE COPY" watermark
- Diagonal across page
- Clearly visible
- Indicates non-official status

8.2.6 Signature Section

Three Signature Pads:

1. Legal Search Officer:

- Name
- Signature
- Date
- Title

2. Director, Deeds:

- Name
- Signature
- Date
- Title
- Official stamp

3. Permanent Secretary:

- Name
- Signature
- Date
- Title
- Official stamp

Note: Digital signatures may be used for online reports

8.2.7 QR Code

Location: Bottom-right corner

Functionality:

- Unique QR Code for each report
- Encoded with:
 - Report Number
 - File Number
 - Generation Date
 - Verification URL

Verification Process:

1. Scan QR Code with smartphone
2. Redirects to KLAES verification portal
3. Displays report authenticity status
4. Shows basic report details
5. Confirms if report is genuine or forged

Security Features:

- QR Code is cryptographically signed
- Cannot be duplicated
- Verification requires internet connection
- Real-time database check

8.2.8 Footer Section

Information Displayed:

- Page number (Page X of Y)
- Confidentiality notice
- Copyright notice
- Contact information
- Verification instructions

Example:

```
1 Page 1 of 3
2 CONFIDENTIAL: This report is intended solely for the use of the
3 individual or entity named above. Unauthorized disclosure is prohibited.

5 © 2026 Kano State Ministry of Land and Physical Planning
6 Verify this report at: verify.klaes.ng
7 Contact: legalsearch@klaes.ng | +234-XXX-XXX-XXXX
```

8.3 Report Generation Process

Step 1: Initiate Report

- Click "View Detailed Records" in Timeline Pane
- System compiles all timeline transactions
- Applies official template

Step 2: Preview

- Report opens in preview mode
- User reviews content
- Can zoom, navigate pages
- Can return to edit if needed

Step 3: Print Manager

- Click "Print" button
- Print Manager dialog opens
- Select copy type:
 - Original (with Coat of Arms)
 - File Copy (with File Copy watermark)

Step 4: Signature

- For Original copy:
 - Legal Search Officer signs (digital or physical)
 - Director, Deeds signs
 - Permanent Secretary signs
- For File Copy:
 - Signatures may be omitted or marked "Copy"

Step 5: Distribution

- Original: Given to applicant
- File Copy: Retained in Ministry records
- Both copies logged in system

8.4 Report Validity

Validity Period:

- Legal Search Reports are valid for 90 days from date of issue
- After 90 days, property status may have changed

- For transactions, fresh search recommended

Legal Status:

- Original copy is legally admissible in court
- Can be used for:
 - Property transactions
 - Loan applications
 - Court proceedings
 - Due diligence
 - Investment decisions

Authenticity Verification:

- Always verify QR Code for important transactions
- Report numbers are registered in central database
- Forged reports are prosecutable offenses

9. TROUBLESHOOTING

9.1 Common Issues and Solutions

Issue 1: "No Token Found for FileNo"

Symptom: Error message when attempting to search

Cause:

- Token not generated
- Token generated for different FileNo
- System error

Solution:

1. Verify FileNo is correct
2. Contact Revenue Officer
3. Request token generation
4. Confirm token is linked to correct FileNo

Issue 2: "Token Already Used"

Symptom: Search blocked despite having token

Cause:

- Token was consumed in previous search
- Token shared accidentally
- System glitch

Solution:

1. Check token status in Revenue Module
2. If used, request new token
3. If not used but shows as used, contact IT support
4. Never share tokens; one token per search

Issue 3: "No Records Found"

Symptom: Search completes but returns empty results

Causes:

- File truly has no records (new file)
- File not yet indexed
- Records exist under different FileNo or PropID
- Data entry error

Solutions:

1. Verify FileNo spelling and format
2. Check if file is new (no historical transactions)
3. Search using alternative identifiers (Plot Number, Holder Name)
4. Contact MDC team to check indexing status
5. If file exists physically but not digitally, initiate indexing

Issue 4: "Duplicate Records Showing"

Symptom: Same transaction appears multiple times

Cause:

- Normal MSDAM behavior (records from multiple tables)
- Data entry duplication
- Incomplete deduplication

Solution:

1. Check color codes (Green=Preferred, Red=Dropped)
2. Review weighing scores
3. If true duplicates (same table, same data), use Clean-up Mode
4. Drop or merge duplicates as appropriate
5. Document action in audit trail

Issue 5: "Timeline Out of Order"

Symptom: Transactions not in chronological order

Causes:

- Missing dates
- Incorrect dates
- System sorting error

Solutions:

1. Check if dates are entered correctly
2. Use Arrange tool to manually reorder (if necessary)
3. Edit records to correct dates
4. Verify Registration Date vs Transaction Date
5. Report persistent issues to IT

Issue 6: "Cannot Add New Record"

Symptom: Add New button grayed out or error on save

Causes:

- Insufficient permissions
- Required fields missing
- System error

Solutions:

1. Verify user has Editor or Admin permissions
2. Check all required fields are filled
3. Validate data format (dates, numbers)
4. Try refreshing page
5. Contact IT if problem persists

Issue 7: "QR Code Not Verifying"

Symptom: QR Code scan fails or shows error

Causes:

- Internet connectivity issue
- Verification server down
- QR Code corrupted
- Report forged

Solutions:

1. Check internet connection
2. Try scanning again
3. Manually enter verification URL
4. Contact IT to check server status
5. If report suspected forged, report immediately

9.2 Error Messages Reference

SN	Error Message	Cause	Solution
1	"Invalid Token"	Token expired or malformed	Request new token
2	"FileNo Not Found"	File doesn't exist or typo	Verify FileNo
3	"Insufficient Permissions"	User lacks required rights	Contact administrator
4	"Database Connection Failed"	Network or server issue	Retry; contact IT
5	"Weighing Calculation Error"	System bug	Report to IT; use manual override
6	"Print Failed"	Printer issue or PDF error	Check printer; try different browser

9.3 Getting Help

Support Channels:

Level 1: Help Desk

- Email: helpdesk@klaes.ng
- Phone: +2348034989043
- Hours: Mon-Fri, 8:00 AM - 4:00 PM

Level 2: Technical Support

- Email: techsupport@klaes.ng
- For system errors and bugs
- Include screenshots and error codes

Level 3: System Administrator

- Email: admin@klaes.ng
- For permission issues and configuration
- Urgent matters only

Emergency Contact:

- For critical system outages
- Phone: +2348034989043

10. APPENDICES

Appendix A: Glossary of Terms

SN	Term	Definition
1	CofO	Certificate of Occupancy
2	DR	Deeds Registration
3	EDMS	Electronic Document Management System
4	FH	File History
5	FileNo	File Number
6	KLAES	Kano Land Administration Enterprise System
7	LSE	Legal Search Engine
8	MDC	Mass Data Capture
9	MSDAM	Multi-Source Aggregated Method
10	OP	Occupancy Permit
11	PRA	Property Records Assistant
12	PropID	Property Identifier
13	QR Code	Quick Response Code
14	Rofo	Right of Occupancy
15	RW	Record to Record Weighing
16	SLTR	Special Land Treatment Request
17	ToT	Transfer of Title
18	TW	Table to Table Weighing

Appendix B: Keyboard Shortcuts

SN	Shortcut	Action
1	Ctrl + N	New Search
2	Ctrl + T	Toggle Timeline View
3	Ctrl + F	Find in Results
4	Ctrl + P	Print Report
5	Ctrl + S	Save Current View
6	F5	Refresh Pane
7	Esc	Cancel/Close

Appendix C: Weighing Method Quick Reference

Record to Record Weighing (RW)

- 1 Fields: Parties (2) + Particulars (2) + Trans. Date (2) + Reg. Time (2) + Reg. Date (2)
- 2 Max Score: 10
- 3 Higher score wins

Table to Table Weighing (TW)

- 1 PRA Table: 5.0
- 2 FH Table: 2.5
- 3 Higher weight wins (if RW tie)

Timeline Weighing

- 1 OP: 10
- 2 ToT: 9
- 3 Rofo: 8
- 4 Others: 1 (sort by date)

Appendix D: Report Checklist

Before issuing Legal Search Report, verify:

- ☐ Token validated and consumed
- ☐ All transactions reviewed
- ☐ Duplicates resolved
- ☐ Timeline chronologically accurate
- ☐ File Information complete
- ☐ Comments/Remarks added
- ☐ QR Code generated
- ☐ Signatures obtained

- [] Watermark correct (Original vs File Copy)
- [] Report number logged
- Supervisor approval
- Certificate issuance
